

Morning Brief — 2026-06-24

HitMaster ZK6 · Daily Intelligence · engine v2.1 · slates regenerated 12:30 UTC on fresh box+pair coverage · calibration refit 13:09 UTC (CALIB-01b)

OPERATOR PLAYS ALL STATES — jurisdiction is not a differentiator (30d per-state box rates near-uniform 7–10%)

1 · YESTERDAY'S VALIDATION (2026-06-23)

Source: daily_intelligence (backfilled 2026-06-24). "Picks hit" = on-slate picks that matched ≥1 draw; state-instances in parentheses (a pick can hit several states).

SCOPE	SLATE	PICKS HIT	HITTING COMBOS
Midday	MISS	0 / 6	—
Evening	HIT	2 / 6 (3 state-inst.)	146 · 268
All Day	HIT	2 / 6 (3 state-inst.)	689 · 268

Slate-level rolling rate (faithful, adaptive_tracking):

SCOPE	7-DAY	30-DAY	DRIFT
All Day	71% (5/7)	90% (27/30)	−19pp
Evening	71% (5/7)	67% (20/30)	+5pp ▲
Midday	57% (4/7)	73% (22/30)	−16pp

The allday/midday 7d dip is an artifact: 6/19 + 6/21 fall in the window and were rotation-regenerated to 0 hits (the regen dropped the combos that had actually hit). Not a live decline. Evening trending up.

2 · TODAY'S SLATES — PRE-FLIGHT

SCOPE	STATUS	PICK #1	TAG	STRAIGHT
Midday	PASS	137	overdue	137
Evening	PASS	059	overdue	905
All Day	PASS	049	overdue	409

3/3 scopes clean · 6 picks each · built on freshly re-imported coverage.

3 · STRATEGIC PICKS (TIER-RANKED) — BOX, ALL STATES

90d = box appearances across the active jurisdiction pool (breadth signal only — not a where-to-bet directive). calib = CALIB-01 modelled P(box hit ≥1 in scope today).

TIER	COMBO	SLATE SLOT(S)	90D	CALIBRATED P(HIT)
T1 · Standout×Conv	059	eve #1 · allday #5	10	allday 14.7% · eve 8.8%
T1 · Standout×Conv	047	eve #5 · midday #5	10	eve 6.5% · mid 2.2%
T1 · Standout	236	midday #6	19 ◀ top	3.1%
T1 · Standout	458	allday #4	15	10.3%
T1 · Standout	016	allday #6	12	10.3%
T1 · Standout	235	midday #2	12	2.5%
T1 · Standout	347	eve #4	11	8.5%
T1 · Standout	145	allday #2	10	7.5%
T1 · Standout	489	eve #3	10	8.1%

T1 · Standout	239	midday #3	10	1.5%
T2 · Convergence	049	allday #1 · eve #2	6	allday 16.1% ◀ top model
T2 · Convergence	358	eve #6 · midday #4	6	mid 4.8% · eve 3.3%
T2 · Overdue	137	midday #1	6	3.3%

4 · RECOMMENDED PLAY — YOUR STYLE (1–2 COMBOS · MAX BET · ALL STATES · RIDE ≤3D)

PRIMARY 0 5 9 box (all states) + straight 905 (eve) / 509 (allday)

Only pick that is T1 footprint (10) AND cross-scope convergence (eve+allday) AND high model prob (allday 14.7%). Strongest all-around evidence today.

SECONDARY 0 4 9 box (all states) + straight 409

Highest calibrated probability today (allday 16.1%) and an allday+evening convergence pick. Shares 0/9 with the primary — overlapping coverage if you prefer a single ticket.

Lean all-day — strongest scope (30d 90%) and holds both top picks. If trimming to one, skip midday (weakest today).

5 · RED FLAGS & NOTES

- **Calibration refit today** (CALIB-01b, 2026-06-24 — gate passed: test Brier $0.03775 \leq 0.03846$). Top-bucket over-prediction now mild (11.1% → 9.5%, was 17.7% → 12.2%) — read 16.1% / 14.7% as ~14% / 13% real. Next refit ~7/8.
- **Midday is structurally weak today**: calibrated P(hit) 1.5–4.8% (vs allday up to 16.1%). Pick #1 137 is overdue/modest footprint while the 19-footprint 236 sits at slate #6 — the known rank-inversion / popularity-ceiling pattern, not an import regression.
- **Evening 7d (71%)** trips the runbook's <75% CONFIG-15 trigger by the letter — but evening is UP vs 30d (+5pp), so no revert recommended.
- **6/23 fully reconciled**: DI backfilled and engine_daily_report recomputed (evening 2, allday 2, midday 0) — all surfaces consistent.
- **House edge**: at uniform ~90% RTP every bet carries ~-10% EV (BUG-162). These picks maximize hit probability, not positive EV.

Why all-states is the right call: 30d per-jurisdiction box-hit rates are near-uniform — DC 10.0%, TX 8.7%, KY/CT/CO/DE/VA/OH/WI 8.3%, SC 7.1%. No single state carries an exploitable edge, so spreading across all states maximizes coverage of each combo's draws. · Generated 2026-06-24 from live Supabase (slate_snapshots · daily_intelligence · adaptive_tracking · histories · app_config.pick_prob_calibration).
