

Morning Brief — 2026-06-25

HitMaster ZK6 · Daily Intelligence · engine v2.1 · slates regenerated 09:42 UTC on fresh box+pair coverage · calibration CALIB-01b (refit 2026-06-24 13:09 UTC — fresh)

OPERATOR PLAYS ALL STATES — jurisdiction is not a differentiator (30d per-state box rates near-uniform 7–9%)

1 · YESTERDAY'S VALIDATION (2026-06-24)

Source: faithful slate n histories (NOT stored DI flags, BUG-162). "Picks hit" = on-slate combos that matched ≥1 real draw; state-instances in parentheses (a pick can hit several states).

SCOPE	SLATE	PICKS HIT	HITTING COMBOS
Midday	HIT	1 / 6 (1 state-inst.)	074
Evening	MISS	0 / 6	—
All Day	HIT	2 / 6 (2 state-inst.)	409 · 458

Slate-level rolling rate (faithful slate n histories):

SCOPE	7-DAY	30-DAY	DRIFT
All Day	71% (5/7)	90% (27/30)	–19pp
Evening	57% (4/7)	63% (19/30)	–6pp
Midday	57% (4/7)	77% (23/30)	–20pp

The allday/midday 7d dip is partly an artifact: 6/19 + 6/21 sit in the 7d window and were rotation-regenerated to 0 hits (the regen dropped combos that had actually printed). Reorder yesterday landed 1/3 — allday #1 458 hit (faithfully); midday #1 632 and evening #1 905 missed.

2 · TODAY'S SLATES — PRE-FLIGHT

SCOPE	STATUS	PICK #1	TAG	STRAIGHT
Midday	PASS	630	overdue	630
Evening	PASS	905	overdue	905
All Day	PASS	451	overdue	451

3/3 scopes clean · 6 picks each · engine v2.1 · all metadata present.

3 · STRATEGIC PICKS (TIER-RANKED) — BOX, ALL STATES

90d = box appearances across the active jurisdiction pool (breadth signal only — not a where-to-bet directive). calib = CALIB-01 modelled P(box hit ≥1 in scope today).

TIER	COMBO	SLATE SLOT(S)	90D	CALIBRATED P(HIT)
T1 · Standout×Conv	058	allday #5 · eve #5	17 ◀ top	allday 8.2% · eve 5.2%
T1 · Standout	106	allday #4	12	10.5%
T1 · Standout	235	midday #3	12	2.4%
T1 · Standout	451	allday #1	11	7.6%
T1 · Standout	473	eve #2	10	8.5%
T1 · Standout	546	eve #6	10	3.7%
T2 · Convergence	509	allday #3 · eve #1	8	allday 14.9% ◀ top model · eve 8.8%
T2 · Convergence	104	allday #6 · eve #4	9	allday 7.5% · eve 5.4%
T2 · Convergence	385	eve #3 · midday #6	4	mid 4.8% · eve 3.3%

T2 · Overdue	630	midday #1	8	6.2%
--------------	-----	-----------	---	------

4 · RECOMMENDED PLAY — YOUR STYLE (1–2 COMBOS · MAX BET · ALL STATES · RIDE ≤3D)

PRIMARY
0 5 8
box (all states) + straight 058 (allday) / 850 (eve)

Only pick that is T1 footprint (17, the highest on board) AND cross-scope convergence (allday+evening) AND solid 14d momentum (7). Strongest all-around evidence today.

SECONDARY
0 5 9
box (all states) + straight 509 (allday) / 905 (eve)

Highest calibrated probability today (allday 14.9%) and an allday+evening convergence pick — also the evening #1. Different set from the primary, so two combos give broad coverage across the day's draws.

Lean all-day — strongest scope (30d 90%) and holds both top picks. If trimming to one, skip midday (weakest today). The overdue headline #1s (630/905/451) carry less evidence than the convergence picks above.

5 · RED FLAGS & NOTES

- **Calibration is fresh** (CALIB-01b, refit 2026-06-24 — gate passed: test Brier $0.03775 \leq 0.03846$; 1 day old). Mild top-bucket over-prediction remains — read 14.9% / 10.5% as ~13% / ~9% real. Next refit ~7/1.
- **Midday is structurally weak today**: calibrated P(hit) 1.5–6.2% (vs allday up to 14.9%). Pick #1 **630** is overdue/modest while the 12-footprint **235** sits at slate #3 — the known rank-inversion / popularity-ceiling pattern, not an import regression.
- **Evening 7d (57%)** trips the runbook's <75% CONFIG-15 trigger by the letter — but evening is only –6pp vs 30d and CO is already at 10 (CONFIG-18 rollback, lever spent). No config ship off a 7d window.
- **Overdue channel ran cold yesterday** (reorder 1/3, only allday #1 458 landed). All three of today's #1s are overdue-tagged again — the convergence picks (058, 509) are the stronger play than the headline #1s.
- **House edge**: at uniform ~90% RTP every bet carries ~–10% EV (BUG-162). These picks maximize hit probability, not positive EV.

Why all-states is the right call: 30d per-jurisdiction box-hit rates are near-uniform — DC 8.9%, TX 8.7%, VA/OH/KY/IL/CO 8.3%, AR/SC 7.1%, DE 6.7%. No single state carries an exploitable edge, so spreading across all states maximizes coverage of each combo's draws. · Generated 2026-06-25 from live Supabase (slate_snapshots · daily_intelligence · adaptive_tracking · histories · app_config.pick_prob_calibration).
