

ZK6 Pick Intelligence Report

All-states view · Generated 2026-06-25 09:58 UTC · report date 2026-06-25

Methodology: picks are ranked by calibrated P(hit) — the CALIB-01 logistic probability that the combo box-matches at least one draw in its scope window today, across **all** jurisdictions. Jurisdiction/state tables are intentionally omitted: for all-states play, which state prints carries no actionable signal. Cross-scope convergence (same combo set on more than one scope's slate) and 14-day momentum are the tie-breakers.

1. Picks Ranked by Hit-Likelihood (state-agnostic)

#	Combo	Scope · Pos	P(hit)	Stake %	14d	Conv	Tag
1	509	allday · r3	14.9%	26.8%	3	A+E	Strong
2	106	allday · r4	10.5%	18.8%	2	—	Depth
3	905	evening · r1	8.8%	25.1%	3	A+E	Overdue
4	473	evening · r2	8.5%	24.4%	8	—	Strong
5	058	allday · r5	8.2%	14.8%	7	A+E	Depth
6	451	allday · r1	7.6%	13.6%	5	—	Overdue
7	104	allday · r6	7.5%	13.5%	3	A+E	Depth
8	394	allday · r2	6.9%	12.4%	6	—	Strong
9	630	midday · r1	6.2%	30.9%	2	—	Overdue
10	140	evening · r4	5.4%	15.5%	3	A+E	Depth
11	058	evening · r5	5.2%	14.8%	7	A+E	Depth
12	835	midday · r6	4.8%	23.8%	3	E+M	Depth
13	546	evening · r6	3.7%	10.7%	7	—	Depth
14	137	midday · r2	3.5%	17.6%	4	—	Strong
15	385	evening · r3	3.3%	9.4%	3	E+M	Strong
16	235	midday · r3	2.4%	12.2%	7	—	Strong
17	762	midday · r4	1.6%	8.2%	2	—	Depth
18	329	midday · r5	1.5%	7.2%	5	—	Depth

Stake % = P(hit) normalized within scope. Conv = scope set when the combo appears on more than one slate (highlighted rows). 14d = engine recentStateHits14d momentum.

2. Cross-Scope Convergence

Combo sets carried on more than one scope's slate today — broadest daily coverage (multiple live draws on the same set).

Combo Set	Scopes	Peak P(hit)	Detail (scope · pos · P(hit) · straight)
0, 5, 9	A+E	14.9%	allday r3 (14.9%, 509) · evening r1 (8.8%, 905)
0, 5, 8	A+E	8.2%	allday r5 (8.2%, 058) · evening r5 (5.2%, 850)

0, 1, 4	A+E	7.5%	allday r6 (7.5%, 041) · evening r4 (5.4%, 140)
3, 5, 8	E+M	4.8%	evening r3 (3.3%, 385) · midday r6 (4.8%, 835)

3. Ride Recommendation

For 1–2 max-bet combos ridden until a hit (operator's style), all states:

- **PRIMARY — 0,5,9** (box, all states). Strongest cross-scope convergence (allday+evening), peak calibrated P(hit) 14.9%. Two live draws on the same set. Straight kicker: 509 / 905.
- **SECONDARY — 106** (allday, box). Highest single-scope calibrated P(hit) 10.5% with no convergence; 14d momentum 2.

4. Notes

- Calibration fitted 2026-06-24 (1d old) — fresh.
- These are calibrated estimates on 2026-05-13+ outcomes; the top bucket mildly over-predicts (validation: pred 17.7% vs actual 12.2%). Treat P(hit) $\geq 15\%$ as "strong," not a promise.
- Doubles/triples picks fall back to the scope base rate (off-model), not a per-pick estimate.
