

HITMASTER ZK6

App Content Handoff — for the Content Agent

Purpose: the complete factual reference for producing ad scripts and Gemini generation prompts (10s / 30s / 90s / 2-minute formats) that convert knowledgeable daily-draw players into: (1) free community group members, (2) Pro group subscribers (\$2.49/mo), and (3) app users.

Use WITH the Brand Rehab Skill Brief v2

(HitMaster_Brand_Rehab_Skill_Brief_v2.md). The brief is the rulebook — vocabulary, filters, visual specs, Gemini prompt conventions. This document is the product truth — screens, features, benefits, exact copy, pricing, and 18 real device screenshots.

If this document and the brief ever conflict on a compliance rule, the brief wins.

Pricing note: the brief was revised to v2.1 on 7/26 — Pro group is **\$2.49/mo** in both documents; earlier copies printing \$0.99 are obsolete.

Version 1.2 · Generated 2026-07-26 (v1.1: Pro price \$2.49/mo; v1.2: content-agent conflict rulings — vocab law, free-group depth, app-price rule, jurisdiction units) · Screenshots captured live from build v2.0 (ZK6 engine v2.1)

1 · Positioning & Audience

What HitMaster is (say this): a **data intelligence and analytics platform** for daily 3-digit draw games — comparable to ESPN Stats, FiveThirtyEight, or Yahoo Finance, but for numerical pattern analysis. The ZK6™ engine analyzes years of public draw data across **39 tracked jurisdiction feeds — spanning 40+ states & provinces (Tri-State and Western Canada feeds each cover multiple states/provinces) — with 76 tracked draws every day** and publishes six ranked daily signals per session, then **verifies every signal against official observed outcomes** — receipts, not promises.

What it is not (never say): a lottery prediction service, a way to win, a gambling product. It sells *analysis and verification*, not outcomes. No rate claims, no guarantees ever.

The audience

Knowledgeable daily-draw players. They already understand box vs straight, midday vs evening sessions, and state-by-state games. **Do not educate down to them — respect their expertise.** What wins them: methodology transparency ("here's WHY this signal"), verification receipts (draw-by-draw, state-by-state), and coverage breadth (their state plus dozens of others). What loses them: hype, guru framing, "guaranteed" anything — this audience has seen every scam; the anti-hype, stats-desk voice IS the differentiator.

The three conversion objectives (keep them distinct!)

Objective	Product	Price	Role in funnel
1. Join the free group	Free Community Facebook Group	Free	Primary conversion funnel. Daily drops (All-Day FULL; Midday/Evening redacted — see §2 depth rule), results, pattern breakdowns. Opted-in audience — rich product content allowed here.
2. Join the Pro group	Pro Facebook Group (inner circle)	\$2.49/mo	Premium community: intelligence drops first, exclusive deep dives, behind-the-scenes app build, locked-in launch perks.
3. Download the app	HitMaster app (App Store / Google Play — pre-launch: "Coming Soon")	Free download (Seeker tier); Oracle+ in-app: \$4.99 5-day · \$9.99/mo · \$89.99/yr	The product itself. Free tier is a real experience (2 of 6 signals + full results ledger + verification).

⚠ **PRICING — DO NOT CONFLATE.** The **\$2.49/mo** is **ONLY the Pro Facebook group**. The app's paid tier is **Oracle+** at \$4.99 (5-day access, no auto-renew), \$9.99/mo, or \$89.99/yr (badge: BEST VALUE, save 25%). An ad that says "get the full app for \$2.49" is factually wrong and creates refund/complaint risk. Scripts must attach each price to its correct product. **App pricing in ads:** the live in-app paywall is the **ONLY** citable source (\$4.99 5-day pass · \$9.99/mo · \$89.99/yr). A "\$4.99/mo iOS launch price" is NOT in the shipped product — do not put any app subscription price in ad copy until the operator confirms final launch pricing; say "free download — upgrade in-app" instead.

Approved one-liners (safe everywhere)

- "Smarter data, sharper signals."
- "Six daily signals. Verified against official outcomes. Every day."
- "The intelligence layer for daily draw analysis — coverage across 40+ states & provinces, 76 draws a day."
- "We publish the signals before the draw, and the receipts after. Methodology, not mystery."

- "No hype. No guarantees. Just pattern analysis you can check yourself."

2 · What Each Membership Actually Gets (facts for scripts)

Free app tier — "Seeker"

- 2 of 6 daily signals per session (ranked #5–#6; the top 4 are hidden), with full signal cards: energy score, why-this-signal reasons, convergence dots, history stats
- **Full Results Ledger** — every official draw across all 39 tracked feeds, 7-day history, search/filter, match badges, replay animations (NOT paywalled — a genuinely useful free tool)
- Verified Track Record + 7-day Replay — full access
- Number Book — unlimited personal lists that auto-report matches over 30 days
- 1 Signal Check per day (look up any 3-digit combo's full signal profile)
- Learn Center, followed-states filtering, light/dark/system themes, draw countdowns, streaks

Oracle+ (app paid tier) adds

- All 6 signals per session + the **optimal straight arrangement** for each
- Unlimited Signal Checks · full pair-intelligence analytics in every pick detail
- Pattern Explorer — any pattern's full appearance history + observed-vs-expected frequency across every tracked jurisdiction
- Budget Planner across all 6 signals · slate save · 3 slate regenerations/day · real-time updates (free tier: 15-min delay)

Free Facebook group gets

- Daily signal drops, yesterday's verified results with real numbers, pattern breakdowns, jurisdiction analysis, verification receipts — free, in an opted-in space
- **Depth rule (locked strategy):** the **All-Day drop is FULL**; **Midday and Evening drops are redacted** in the free group — that gap IS the conversion frame ("the full session drops live in Pro"). Note: the free All-Day post carries no Pro pitch by rule (pure value). Frame free-group ads around the full All-Day drop; frame Pro-group ads around unredacted Midday + Evening + first access.

Pro Facebook group (\$2.49/mo) adds

- Intelligence drops first (before the free group) · exclusive deep dives · behind-the-scenes app build · direct line to founders · locked-in launch perks · premium verified-receipt graphics

Exact in-app CTA strings (reuse verbatim in scripts if useful)

Where	String
Home gate	"You saw the free tier" · "Oracle+ unlocks the full K6 slate — plus the optimal straight order and deep analytics." · "Upgrade · \$9.99/mo 🏆"
Slates upsell	"🏆 Unlock your full K6 Slate" · "Pro unlocks all 6 signals, optimal straights, pattern analysis." · "🏆 Begin Pro Trial · \$4.99"
Profile	"Try 5 days for \$4.99 → then \$9.99/mo, cancel anytime"
Locked picks	"4 HIDDEN PICKS · Top-ranked · Oracle+ only" · "🏆 Or upgrade for full access →"
Paywall hero	"Unlock the full K6 slate" · "Six daily signals · verified outcomes · full pattern analytics"

Pro group pitch (brief
\$10, price corrected)

🔥 Join the inner circle for \$2.49/mo: daily intelligence drops first, exclusive deep dives, behind-the-scenes app build, and locked-in launch perks." (*Brief v2 prints an outdated \$.99 — use \$2.49.*)

Trust fact for scripts: the paywall deliberately makes **no hit-rate claim** — "the paywall sells capability, not a rate."
Mirror that discipline in ads: never invent a percentage. The only rate-like statement allowed in-app is the per-energy-band honesty footer (e.g. "245 picks at 90–100 energy hit 76% historically"), which only renders with ≥50 samples — do NOT lift these numbers into ads; they change daily.

3 · Screen-by-Screen — Features & Benefits

Screenshots: live captures, iPhone viewport, dark theme (brand default). Files in `assets/marketing/screencaps_2026-07-26/` — `free_*.png` and `premium_*.png` versions of each screen. All product-UI screenshots are Tier 2/4/5 assets only (groups + App Store listing) — never public page or paid Meta placements.

Home — "Today's Signals" ALL USERS

The daily ritual screen. Scope switcher (Midday ☀️ / Evening 🌙 / All Day ♦️), LAST MATCH pill (combo · state · when), hero stats (avg energy · verified matches today · live next-draw countdown), 30-day energy sparkline, then the six ranked signal cards — each with best-straight digits, box set, WHY THIS SIGNAL reasons, 4-signal convergence dots, all-time match count, and an energy meter.

Benefit angle: "Open one screen each morning and the day's analysis is done — ranked, explained, and time-stamped before the first draw."

Free: sees signals #5–#6 + "4 HIDDEN PICKS" rows. Delight: match-day celebration overlay with share; daily streaks with monthly streak freeze; after-8PM daily recap card; loss days get an honest "here's what got close" card.

Slates — "ZK6 Signals" ALL USERS CONVERSION SURFACE

Three tabs: **Signals** (list view or a 2×3 screenshot-friendly grid), **Matches** (live draw ticker + today's confirmed matches across all scopes/jurisdictions), **More** (save slate, 7-day replay, Pattern Explorer). Filter singles/doubles, sort by rank/energy/frequency.

Benefit angle: "A live match feed across every jurisdiction — see the engine's work verified in real time, state by state."

The free view (shown) is the single best conversion visual in the app: "4 HIDDEN PICKS · Top-ranked · Oracle+ only" directly above a fully-detailed STRONG SIGNAL card — the value gap is visible, not claimed.

Results Ledger FREE — NO GATING

Day-by-day official draw ledger, all tracked jurisdictions, 7-day tabs with hit dots (gold = straight landed, cyan = box). Search any state/game/digits, session filters, cluster view (groups draws by box-set), MATCHES TODAY hero band with WE-PICKED → DRAWN tiles, inline replay animation per match, share buttons, day stats sheet.

Benefit angle: "Every draw in the country, one screen — and every ZK6 match stamped right on the official result. Check our work yourself."

Entirely free — lead with this for app-download ads: the ledger alone replaces checking 5 state sites.

Verified Track Record FREE TRUST SURFACE

"Last 30 days · ZK6 K6 matches, draw-by-draw." Summary stats (MATCHES · STRAIGHT · BOX · DAYS, across N jurisdictions), then a day-grouped receipt stream: every confirmed match with the digits, ★ STRAIGHT / 🎯 BOX tag, and "Drew {result} in {state} {session}". Straight matches show the actual drawn order.

Benefit angle: "Receipts, draw-by-draw. Not a marketing number — a list you can cross-check against your state's official results."

Matches are verified mechanically: box = same 3 digits any order vs the official draw; straight = exact order; session-gated (an evening signal can never be credited to a midday draw). This mechanism is a script-worthy differentiator.

Number Book FREE

Personal number collections: create lists by scope + states (region-grouped picker), add numbers manually or pull today's 6 signals in one tap, star favorites. Every saved number is auto-checked against 30 days of real draws — matched numbers rise to the top with "3× MATCHES · NY evening 2d ago" and a full-history link. Saved slates become read-only records.

Benefit angle: "Your personal numbers, tracked automatically. If your birthday combo matched in any state you follow, the Book already knows."

Speaks directly to how this audience already behaves (everyone has personal numbers) — strong app-download hook.

Pattern Explorer ORACLE+ ONLY

Research surface: **Footprint** (any 3-digit pattern's full appearance history — jurisdictions, orderings, observed-vs-expected, 30d/90d windows, session filter) and **Frequency** (all 220 unordered sets and digit pairs vs mathematical baselines, sortable by ratio/gap).

Benefit angle: "The research desk: any pattern's complete history against its mathematical expectation — across every tracked jurisdiction."

Free users see the upgrade gate (free_pattern-explorer.png shows it — useful conversion visual).

Learn Center FREE

Five plain-English modules: What is a 3-digit draw? · Box vs Straight · Daily Drawing Times (76 draws/day) · States & Regions (in-app copy says "40+ jurisdictions"; in ads use "40+ states & provinces" — see §1) · How ZK6 Works For You. Includes the responsible-use framing: "data-driven analysis... NOT a guarantee of outcomes. Every draw is independent. Use responsibly, within your means."

Benefit angle (secondary): for ads, Learn signals legitimacy — the platform teaches methodology instead of selling mystery.

Profile ALL USERS

Tier status (Seeker / Oracle+ 🏆), activity stats, followed-states picker (filters Results, Match Feed, Track Record, and Number Book to your states), light/dark/system themes, coffee mode (chrome-free 6-signal grid), notification controls (next-draw alert 15 min before · slate ready · match alert), ZK6 glossary, and the free-vs-Oracle+ comparison table.

Benefit angle: "Follow your states and the whole app filters to them — alerts 15 minutes before your draw."

Paywall — "/paywall" [REFERENCE](#)

Hero: "Unlock the full K6 slate · Six daily signals · verified outcomes · full pattern analytics." Feature table (Full K6 Slate, Signal Checks 1/day → Unlimited, Budget Planner, Live Updates 15-min delay → Real-time, Detailed Reasons, Previous Matches). Plans: 5-Day \$4.99 (no auto-renew) · Monthly \$9.99 · Annual \$89.99 (BEST VALUE). Disclaimer: "For analytical research only. Not financial advice. Use responsibly."

Use this screen as the factual source for any price/feature claim in an ad. Note again: no hit-rate claim appears here — by design.

Also available (not pictured inline)

- **Replay** (free) — last 7 days of slates vs actual draws, day by day, per-scope match pills
- **Signal Check modal** — any combo's full profile: energy verdict, draws-ago, all-time matches, expected-every-N-draws, pair signals; free 1/day, Oracle+ unlimited; shareable
- **Pick Detail modal** — INTEL (confidence, signal breakdown, why-this-order, resolved-in states) / PAIRS (pair matrix, Oracle+) / PLAY (bet cards \$0.25 → \$225 straight / \$37.50 box, replay, save, share)
- **Signal Explainer** — "How this signal was made": the engine scored every combo, ranked by weighted signal sum, rail filters listed, "{combo} survived all six selection passes" — kills the "is this random?" suspicion
- **Budget Planner** — enter a budget, pick sessions and 1-vs-32 states, get a per-signal box/straight allocation with cost and potential-match math
- **Draw Ticker** — live countdown to the next of 76 daily draws with the two after it

4 · Compliance for Ad Production (condensed from Brief v2 — brief wins on conflict)

THE RULE THAT GOVERNS EVERYTHING: the classifier reads every image and video frame via OCR. Captions are clean; images leak. **Check the frame, not the caption.** Both May de-recommendations came from product-UI imagery with real 3-digit numbers and gambling vocabulary visible in the pixels.

Destination decides the rules

Where the ad will run	Rules
Paid Meta placements / public FB page / boosted posts	STRICT (Tier-1): must pass the Two-Question Filter — NO 3-digit numbers visible in any frame, NO forbidden vocabulary rendered on screen (HITS · STRAIGHT · BOX · PICKS · WIN · LUCKY · BET · JACKPOT · LOTTERY · MIDDAY/EVENING as session labels, etc.). No product-UI screenshots. Use abstract data visuals, hash placeholders (###), brand graphics.
Inside the free group / Pro group / cross-posts from the group	Relaxed (Tier-2/3/4): product UI, real numbers, box/straight vocabulary allowed — audience opted in. Still: no guarantees, no minors, caption variation across cross-posted groups.
App Store / Google Play listing	Product UI with numbers OK (expected by reviewers). Position as data analytics. NOTHING implying guaranteed outcomes.
Non-Meta channels (YouTube/TikTok)	Meta classifier doesn't apply, but keep the brand voice (no hype, no guarantees, no casino imagery) — clips get re-shared into Meta surfaces, so default to Tier-1-clean unless produced explicitly for in-group use.

Default posture for THIS ad set: produce every master ad Two-Question-clean (no 3-digit numbers on screen, no forbidden words rendered), so any cut can run anywhere. Then optionally produce in-group variants that show real product UI. A "subscriber exclusive" badge does NOT protect an asset — if numbers are visible, it's group-only.

Vocabulary translation (for scripts & on-screen text)

Never (public)	Say instead
hits / winning numbers	patterns identified · signals matched · verified matches · predictions verified
picks / daily picks / hot picks	daily signals · intelligence reports · data drops · top signals
lottery / lotto / Pick 3	daily draw games · 3-digit draws · numerical pattern analysis
lottery players	users · community · members · the crew
play / bet	use · engage · apply
win / winners	succeed · outperform · gain advantage
straight/box as status labels	STRAIGHT MATCH / BOX MATCH / MATCH — the locked caption law (never "exact match"/"partial match"; "partial match" is banned). Caption text only: these labels must never be rendered inside public/paid-placement images (Two-Question Filter).

Visual rules for generated footage

- Brand palette strict: electric purple #A855F7—#C084FC · metallic gold #FBBF24—#F59E0B · deep black #0A0A0F to navy #1E1B4B · cyan #06B6D4 data accents · white text. Lightning bolt motif 2-3× per asset.
- Approved: abstract data streams, signal waves, holographic dashboards WITHOUT real numbers, cosmic/portal, vault/lock for "inside the group", real people focused at screens, clean-desk lifestyle.
- Forbidden: cash/money imagery, tickets, scratch-offs, dice/cards/chips/slots, "WINNER" graphics, dollar-sign decor, red 3-digit pick cards.
- Music 70–90 BPM confident/measured; NO casino fanfares, slot bells, cash registers. Voiceover calm and confident; cowboy voice sparingly for community clips only.
- Every ad ends with: HitMaster ZK6 wordmark + lightning bolt + "Coming Soon — App Store & Google Play" (pre-launch) + the required disclaimer line (below).

Required in every ad (any length, any destination)

- On-screen or spoken: **"For analytical research only. Not a guarantee of outcomes. Use responsibly."** (18+ audience targeting on paid placements.)
- No invented statistics, no rate claims, no income implications, no urgency-screaming ("last chance!", caps-lock, >3 emoji).

Gemini generation reminders (full conventions in Brief v2 §8-9)

- Natural-language scene prose, not tag soup; every rendered text string in quotes + "must be spelled exactly as written"; hex palette listed; aspect ratio last line.
- ALWAYS end prompts with the Universal Prohibition Clause (no citation tags / bracketed metadata / 3-digit numbers / forbidden vocab / gambling imagery). Generate in a FRESH chat.
- Video reality: AI tools produce 6–8s coherent clips. A 30s ad = ~4 scenes; 90s = ~12; 2-min = ~15–18 scenes stitched. Lock the hardest scene first; budget 3-5 generations per scene. Use "Thinking"-class image model for brand assets.

5 · Ad Format Playbook — 10s / 30s / 90s / 2-min × 3 objectives

Formats: 9:16 vertical 1080×1920 primary; 1:1 and 4:5 cuts for feed. These are structural recipes — the content agent owns the creative execution.

10 seconds — single-hook cutdown (paid placement workhorse)

Objective	Structure (approved-vocab example)
Free group	Hook (0-3s): "Six daily signals. Verified against official outcomes." → Proof flash (3-7s): abstract signal wave resolving to a ✓ → CTA (7-10s): "The full drops are free in the community. Link below." + wordmark + disclaimer.
Pro group	"The inner circle sees the drops first." → vault opening on abstract data → "\$2.49/mo. Founders inside." + wordmark.
App	"Every draw in the country. One screen." → dashboard silhouette (### placeholders) → "HitMaster — coming to App Store & Google Play."

30 seconds — hook → proof → CTA

Arc: (0-5s) audience-respecting hook ("You already track the numbers. We built the desk.") → (5-18s) methodology montage: 40+ states & provinces · 76 draws/day · six ranked signals each morning · every signal checked against the official result → (18-25s) trust beat: "Receipts published daily. No guarantees, ever — that's the point." → (25-30s) objective CTA + wordmark + disclaimer. For in-group variants only: real screen recordings of Results Ledger match badges and the Track Record stream are the strongest 5 seconds available.

90 seconds — the story ad (group content / YouTube)

Five-act: (1) The problem — checking five state sites, guru pages full of hype, nobody shows receipts (10s). (2) The engine — ZK6 scores every 3-digit set 000–999 on four signals, ranks six per session, time-stamped before the draw (20s). (3) The verification — session-gated matching vs official outcomes; Track Record receipts draw-by-draw (20s). (4) The tour — Home ritual → live match feed → Number Book auto-tracking personal numbers → Pattern Explorer research desk (25s, product UI in group versions / abstract in public versions). (5) The ladder — free community → Pro inner circle \$2.49/mo → app with Oracle+ (10s) + closing brand + disclaimer (5s).

2 minutes — the deep explainer (group pinned post / YouTube / launch asset)

Extended 90s arc plus: the Learn Center philosophy (we teach the method), a real morning walkthrough narrated calmly ("7 AM: the slate is generated and time-stamped — here's what the engine surfaced and why"), the honesty positioning as the climax ("Every draw is independent. Anyone promising outcomes is lying to you. We publish analysis and we publish receipts — you judge."), then the full three-tier CTA. This length lives where the audience already opted in — it can carry real product UI throughout the group version.

CTA lines per objective (approved vocab)

- **Free group:** "Full daily intelligence drops, free, in the community — link below." / "No fees. No hype. If it's a fit for your crew, come see the receipts."
- **Pro group:** "Inner circle: drops first, deep dives, the app build behind the scenes — \$2.49/mo." / "Lock in launch perks before the app ships."
- **App:** "HitMaster — coming soon to App Store & Google Play. The free tier is real: the ledger, the receipts, two daily signals." / "Download free. Upgrade to Oracle+ when the preview convinces you: 5 days for \$4.99."

Screenshot asset manifest (18 files)

File (free_ / premium_)	Shows	Best use
home	Daily ritual: hero stats, countdown, signal cards (premium = all 6, free = locked rows)	App ads (group), App Store shot #1
slates	Signals workspace; free version shows the HIDDEN PICKS conversion gap	Oracle+ conversion (group), App Store #2
results	Official ledger + match badges	Trust beat (group), App Store #3
track-record	30-day receipt stream + summary stats	Trust beat (group), App Store #4
book	Personal lists with auto-match reporting	App-download hook (group), App Store #5
pattern-explorer	Premium = research desk; free = upgrade gate	Oracle+ conversion (group)
learn / account / paywall	Education, profile+states, pricing	Reference; App Store #6 (learn or account)

All 18 are Tier 2/4/5 only (they contain real 3-digit numbers and session labels). For public/paid placements, commission Gemini abstract equivalents using §4 rules.

Framed App-Store shots (ready to submit / reuse in group ads)

Six device-framed composites at the App Store 6.7" spec (1290×2796) live in `assets/marketing/appstore_shots_2026-07-26/` : 01 Home ("Six daily signals, ranked & explained") · 02 Signals ("See why, not just what") · 03 Ledger ("Every draw in the country. One ledger.") · 04 Track Record ("Receipts, draw by draw") · 05 Number Book ("Your numbers, tracked automatically") · 06 Pattern Explorer ("Research any pattern's full history"). Regenerate anytime: `npx tsx scripts/render-appstore-shots.ts assets/marketing/appstore-shots.html <outdir>` . Same tier restriction as the raw captures: App Store listing + groups only.
