

Morning Brief — 2026-06-26

HitMaster ZK6 · Daily Intelligence · engine v2.1 · slates regenerated 10:24 UTC on fresh box+pair coverage · calibration CALIB-01b (refit \${CALIB_FIT}) 13:09 UTC — 2d old, fresh)

OPERATOR PLAYS ALL STATES — jurisdiction is not a differentiator (30d per-state box rates near-uniform 7–9%)

1 · YESTERDAY'S VALIDATION (2026-06-25)

Source: faithful slate n histories (NOT stored DI flags, BUG-162). "Picks hit" = on-slate combos that matched ≥1 real draw; state-instances in parentheses (a pick can hit several states).

SCOPE	SLATE	PICKS HIT	HITTING COMBOS (SORTED SET)
Midday	MISS	0 / 6	—
Evening	HIT	3 / 6 (3 state-inst.)	059 · 014 · 456
All Day	HIT	2 / 6 (4 state-inst.)	059 · 014

Slate-level rolling rate (faithful slate n histories):

SCOPE	7-DAY	30-DAY	DRIFT
All Day	71% (5/7)	90% (27/30)	–19pp
Evening	57% (4/7)	63% (19/30)	–6pp
Midday	43% (3/7)	73% (22/30)	–30pp

Reorder yesterday landed 1/3 — evening #1 905 hit (faithfully, slate HIT); midday #1 630 and allday #1 451 missed. Of the 6/25 recommended plays, the secondary 509 (set 059) hit on both evening and allday; the primary 058 missed. Evening had its strongest day of the week (3/6).

2 · TODAY'S SLATES — PRE-FLIGHT

SCOPE	STATUS	PICK #1	TAG	STRAIGHT
Midday	PASS	235	overdue	352
Evening	PASS	563	overdue	563
All Day	PASS	523	overdue	235

3/3 scopes clean · 6 picks each · engine v2.1 · all metadata present. All three #1s are overdue-tagged again.

3 · STRATEGIC PICKS (TIER-RANKED) — BOX, ALL STATES

90d = box appearances across the top-10 active jurisdictions (breadth signal only — not a where-to-bet directive). calib = CALIB-01b modelled P(box hit ≥1 in scope today). Convergence = same set on more than one scope's slate.

TIER	SET	SLATE SLOT(S)	90D	CALIBRATED P(HIT)
T1 · Standout×Conv	579	allday #6 · eve #2	16 ◀ top	allday 3.4% · eve 2.8%
T1 · Standout×Conv	058	allday #2 · eve #5	15	allday 8.2% · eve 5.2%
T1 · Standout×Conv	356	allday #3 · eve #1 · mid #6	15	allday 7.9% · mid 6.4% · eve 3.6%
T1 · Standout×Conv	235	allday #1 · midday #1	14	allday 3.6% · mid 2.5%
T1 · Standout×Conv	379	allday #4 · eve #4	13	allday 8.2% ◀ top model · eve 3.5%
T1 · Standout	349	eve #3	10	5.7%
T1 · Standout	479	midday #5	10	2.7%
T2 · Convergence	239	allday #5 · eve #6 · mid #3	9	allday 6.2% · eve 3.2% · mid 1.5%

T3/T4 depth: 267 (midday #2, 90d 6) and 358 (midday #4, 90d 5) — single-scope, low footprint. Full 18-pick table available on request.

4 · RECOMMENDED PLAY — YOUR STYLE (1–2 COMBOS · MAX BET · ALL STATES · RIDE ≤3D)

PRIMARY 0 5 8 box (all states) + straight **058** (allday) / **850** (eve)

The cleanest all-around pick: top-tier footprint (15), cross-scope convergence (allday+evening), the highest calibrated P(hit) on the board (8.2% allday) and max 14d momentum (7). Recurs from yesterday — the set itself didn't print 6/25 but the evidence stack is unchanged and strongest.

SECONDARY 3 5 6 box (all states) + straight **635** (allday) / **563** (eve)

The only **triple-scope** convergence on the board (allday+evening+midday — broadest coverage of the day's draws), footprint 15, P(hit) 7.9% allday / 6.4% midday, 14d momentum 7. Also the evening #1. Different set from the primary, so two combos cover both digit families.

Lean all-day — strongest scope (30d 90%) and it holds both top picks. If trimming to one, skip midday (weakest today: 7d 43%, every pick $P < 6.5\%$). The overdue headline #1s (235 / 523) carry less evidence than the convergence picks above — note 356 is the exception, an overdue evening #1 that is *also* the strongest convergence set.

5 · RED FLAGS & NOTES

- **Calibration is fresh** (CALIB-01b, refit $\$(\text{CALIB_FIT})$ — gate passed: test Brier $0.03775 \leq 0.03846$; 2 days old). Mild top-bucket over-prediction remains — read 8.2% as ~6–7% real. Next refit ~7/1.
- **Midday is structurally weak today**: calibrated P(hit) 1.5–6.4%, 7d slate rate 43% (vs 30d 73%, –30pp). Pick #1 **235** is overdue/low-P; the strongest midday set **356** sits at slot #6 — the known rank-inversion / popularity-ceiling pattern, not an import regression.
- **Allday 7d (71%) dipped –19pp vs 30d (90%)** but is still the top scope and holds both recommended picks. No action — small-n week within the 6/19+ rotation-regen tail.
- **Evening 7d (57%)** trips the runbook's <75% CONFIG-15 trigger by the letter — but evening is only –6pp vs 30d and CO is already at 10 (CONFIG-18 rollback, lever spent). No config ship off a 7d window. Evening also had the best day yesterday (3/6).
- **Overdue channel ran 1/3 yesterday** (only evening #1 905 landed). All three of today's #1s are overdue-tagged again — the convergence picks (058, 356) are the stronger play than the headline #1s.
- **House edge**: at uniform ~90% RTP every bet carries ~–10% EV (BUG-162). These picks maximize hit probability, not positive EV.

Why all-states is the right call: 30d per-jurisdiction box-hit rates are near-uniform — TX 8.7%, CO/IL/KY/WI/OH 8.3%, DC 7.8%, AR/SC 7.1%, CA 6.7%. No single state carries an exploitable edge, so spreading across all states maximizes coverage of each combo's draws. · Generated 2026-06-26 from live Supabase (slate_snapshots · daily_intelligence · adaptive_tracking · histories · app_config.pick_prob_calibration).
